

**Show me how different
patterns of movement
produce different
patterns in sound**

Card
29

Consider the different patterns of movement I may be able make:

- using my fingers and hands to make patterns of sound with an instrument or with a touchscreen
- moving my arms up and down to produce patterns in sound using beam technology
- using my feet or legs to kick a beat on a bass drum
- using a regular movement of my head to operate a switch or break a beam and make a musical pattern
- using my whole body to break a beam as I rock to and fro
- using a motion-sensitive beam on my eyelids to convert regular movement to patterns in sound
