

**Notice how patterns
of change in sound
can affect the
way I feel**

Card
30

Be sensitive to the way that different patterns in sound affect me:

- repeated sounds that get louder and faster may make me excited
- do repeated sounds that get slower and quieter calm me down?
- how do I respond to a scale of notes that gets higher and higher?
- what about a descending scale that goes very low?
- how do I react when a regular pattern suddenly stops?
- do moving sources of sound excite my attention?
