

Show me how simple
patterns in sound can
help me understand the
way the world works

Card
32

Let me experience patterns of sound in everyday life:

- footsteps getting louder as someone gets nearer
- the sound of a car engine getting louder and then quieter again as it passes by
- the beeping of the microwave indicating that some food is cooked
- the ticking of a clock and the dong of its chimes
- the dripping of a tap that needs to be turned off
- record the patterns of sound for me to enjoy listening to them in a different context
